## Important Notes

### 1. Leap Year Adjustments:

- This year is treated as a common year (12 months). If the structure changes, an additional month, Adar II, would follow Adar.

### 2. Start of the Day:

- In the Jewish calendar, days begin at sunset. All holiday dates listed above start the evening prior.

### 3. Structure:

- The Jewish calendar is lunisolar, and months are based on the moon's cycles.

## Calendar Features

If you'd like, this layout can be adapted for printable formats or interactive tools for planning Jewish observances, holidays, or events.
